Education

B.tech C.S.E

🏢 United College of Engineering and Research Naini Prayagraj

📅 2024 - 2028 · Undergraduate

I am a Computer Science Engineering student currently in my 4th semester, focused on building strong fundamentals in software development, problem solving, and computer science concepts.

I enjoy working on real-world projects that help me apply what I learn in areas such as Artificial Intelligence, Web Development, and Cybersecurity. My goal is to continuously strengthen my skills in programming, data structures, and system thinking while exploring technologies that shape the future.

Along with academics, I actively work on projects, technical learning, and developer tools to improve my practical understanding of technology.

Currently, Alongside my studies, I am preparing for competitive exams while continuously developing the skills required for internships, collaborative projects, and real-world industry experience

I believe the best engineers are those who keep learning, keep building, and keep solving real problems.
